THE WREN INSURANCE ASSOCIATION

SOLVENCY AND FINANCIAL CONDITION REPORT

Year Ended 30 June 2022

Contents

Directors responsibility statement

We acknowledge our responsibility for preparing the Association's Solvency and Financial Condition Report in all material respects in accordance with the PRA Rules and the Solvency II Regulations.

We are satisfied that:

- throughout the financial year in question, the Association has complied in all material respects with the applicable requirements of the PRA Rules and the Solvency II Regulations; and

- it is reasonable to believe that the Association has continued to so comply subsequently and will continue to so comply in future.

For and on behalf of the Board of The Wren Insurance Association Limited

S J Peat
Director

H O Wells
Director

28 September 2022

A. Summary

The structure of the Solvency and Financial Condition Report (SFCR) follows the public disclosure requirements of Articles 290 to 303 of the Commission Delegated Regulation (EU) 2015/35 (Solvency II regulations).

This is the SFCR for The Wren Insurance Association Limited (Wren or the Association) based on the financial position as at 30 June 2022.

The report sets out different aspects of the Association's solvency and financial condition, specifically its business and performance, system of governance, risk profile, valuation methods used for solvency purposes and its capital management practices. The Association's financial year runs to 30 June each year and it reports its results in Sterling.

The ultimate Administrative Body that has the responsibility for all of these matters is the Board of Directors of the Association, with the help of various governance and control functions that it has put in place to monitor and manage the business.

In accordance with the Prudential Regulation Authority (PRA) rulebook the Association has taken the benefit of the audit exemption of the SFCR. On 17 October 2018 the PRA published Policy Statement – PS25/18 Solvency II: External audit of the public disclosure requirement. This should be read in conjunction with the Supervisory Statement SS11/16 and the External Audit Part of the PRA rulebook.

The Association's approach to capital management and valuation for solvency purposes remains stable and this is demonstrated through its capital ratios summarised below. The capital requirements are calculated in accordance with the Solvency II standard formula which the Association has determined to be appropriate for its risk profile.

For Solvency Capital Requirement (SCR) purposes the total eligible own funds stood at £45.1m (2021 : £39.7m). Eligible own funds cover the SCR of £21.8m (2021 : £28.7m) with a capital adequacy ratio of 206.88% (2021 : 138.5%). The Minimum Capital Requirement (MCR) is £5.4m (2021 : £7.2m) leading to an MCR capital adequacy ratio of 827.5% (2021 : 554.0%).

B. Business and performance

B.1. Business

The Wren Insurance Association Limited is a mutual insurance company. The Association is registered in England and Wales as a company limited by guarantee without share capital. The Association was founded in 1987 and currently has 70 Members. Of the 70 current Members, one Member has run-off cover only. As a mutual insurance company the liability of its Members is limited to the calls and premiums set by its Directors.

The Association is managed on a day-to-day basis by Tindall Riley & Co Limited (trading as Wren Managers (TRC or the Managers)). TRC is a private company owned principally by its directors and other senior staff.

The Association is regulated by the PRA and the Financial Conduct Authority (FCA). Both the PRA and the FCA operate a risk-based approach to supervision, which places emphasis on the need for regulated firms to have in place robust risk management frameworks. The PRA is the lead supervisor for the purposes of Solvency II regulation.

Contact details for the PRA and the FCA can be found on their respective websites:
www.bankofengland.co.uk/pra
www.fca.org.uk

The Association's external auditor is Mazars LLP, whose address is 30 Old Bailey, London, EC4M 7AU.

The Association is owned 100% by the Mutual Membership.

The Association provides professional indemnity insurance to a select group of architects (the Members). The Association currently underwrites all business in the United Kingdom and underwriting is carried out from the Managers' office in London.

B.2. Underwriting performance

The Association's financial results for the year ended 30 June 2022 have been prepared in the midst of the Russian invasion of Ukraine and one of the largest spikes in inflation for over 40 years.

During the previous financial year the Association experienced a strong return in its investment portfolio following periods of significant volatility, however, this strong return was offset by the deterioration of cladding notifications. During the current financial year ended 30 June 2022 the Association has experienced a complete 180 degree rotation in fortunes where the current policy year notifications and the prior year cladding notifications have stabilised and seen some reserve releases. This positive development was offset by investment losses which were driven by the spike in inflation, rising interest rates and the invasion of Ukraine by Russia.

The combination of these factors resulted in an overall surplus for the year of £0.8 million (2021 : £0.8 million) which resulted in the Association's capital and reserves increasing marginally from £39.0 million to £39.9 million. The Association remains in a sound financial position, with capital in excess of the Solvency Capital Requirement (SCR) set by the Prudential Regulation Authority (PRA).

At the renewal on 1 July 2021, there was an 'as expiry' renewal of the cladding cover provided, capped at an aggregate exposure for the Association. The Association saw further growth in membership during the policy year with one new Member joining the Association while one Member left the Association following this Member going into administration. At the end of the policy year the Association had 70 Members. Overall, total Call income of the Association was down compared to the prior year, at £19.2 million (2021 : £19.9 million) largely due to lower fee income being declared at renewal compared to the prior year.

Reinsurance costs were higher than the prior year at £3.4 million (2021 : £3.0 million), due to the an increase in the reinsurance rates compared to the prior year and the reinstatement premium paid in respect of the 2009/10 policy year following the settlement of a large claim.

The investment income credited to the policy year, which is based on the expected longer-term rate of return, was marginally higher than the previous year at £2.4 million (2021 : £2.3 million). This was the result of the higher projected portfolio when the budget was set, but the longer-term rate remained the same as the prior year at 2.6%.

Net claims incurred for the financial year were significantly lower than the prior year – £1.0 million against £17.2 million. Gross claims paid, at £15.8 million, were higher than the prior year's figure of £7.4 million but this simply reflects the timing of settlement. Following the settlement of a number of large claims, reinsurance recoveries of £5.5 million were made during the current year (2021 : £0).

GAAP ultimate claims (consisting of paid, outstanding and IBNER) in the 2021/22 policy year were marginally higher in value than in 2020/21 and higher in number at 135 (2021 : 115). Following the end of the policy year seven additional notifications were accepted, bringing the total notifications to 142. None of these notifications carried a figured reserve above £100,000. The Association has continued to see the notifications that involve cladding develop with a few of those settling during the current year. However, a promising sign is that the deterioration seen over the last two financial years has not been seen during the current financial year and the values of those notifications appear to be stabilising.

A number of these notifications remain precautionary in nature, but have the potential to develop into significant claims against the Association. The potential liability is continually assessed as there is limited information available to confidently predict settlement outcomes at this stage. Using the reserving approach adopted in the 2020 financial year, these cladding related notifications have seen limited changes in aggregate projected values compared to the prior year. Gross outstanding claims at year end of £46.0 million have seen a reduction in value compared to the prior year of £56.5 million, reflecting the settlement of a number of large claims. Following the settlement of the large gross outstanding claims, reinsurers' share of outstanding claims reduced to £3.9 million from £5.2 million. The claims position in older policy years showed an improvement, with a £7.4 million release compared to a deterioration of £9.6 million in the prior year. This reflected the improvement and settlement of a number of notifications during the current year and the release of surplus IBNER.

Operating costs were higher than in 2021/22 at £5.8 million (2020/21 : £5.4 million), reflecting an inflationary increase to the management fee and regulatory fees. The balance on the underwriting (technical) account was a surplus of £11.4 million (2021 : deficit of £3.5 million).

The following table shows a summary of the technical (underwriting) account for the year ended 30 June 2022 (based on UK GAAP).

Table 1: Recent underwriting performance

Sources of income and expenditure	£m 2021/22	£m 2020/21
Calls and premiums	19.2	19.9
Return calls	0.0	0.0
Reinsurance premiums	(3.4)	(3.0)
Investment income (LTIR basis)	2.4	2.3
Net claims incurred	(1.0)	(17.2)
Net operating expenses	(5.8)	(5.4)
Balance of the technical account	**11.4**	**(3.5)**

The Association's market excess of loss reinsurance was renewed at 1 July 2022. The excess of loss programme reduces the impact of individual large losses on the Association. The Association retains the first £3m of every claim (except in the case of a cladding claim) above which the market reinsurance arrangements respond up to the £20m maximum limit of cover. In respect of losses arising from cladding claims, the Association retains the first £2m in the aggregate per Member per policy year and gives cover up to £5.0m in the aggregate per Member per policy year with reinsurance and a maximum aggregate limit of cover provided by the Association and reinsurers.

B.3. Investment performance

In accordance with the investment policy, the investment mandate is updated on a regular basis. The asset allocation established within the mandate is principally determined to ensure that future cash flows arising from liabilities (principally claims reserves) are matched by available assets of the correct currency and duration. Effective risk management is therefore the principal driver of investment allocation.

Having established a matched portfolio, investment risk is accepted to achieve the best return available from the surplus assets.

Some factors that may influence future investment return are:

- Market performance: as affected by macro-economic, political or other factors
- Capital allocation and risk profile: determining the risk accepted into the portfolio
- Portfolio management: including asset allocation (both strategic and tactical)

The investment performance during the financial year is a tale of two halves with the first half of the year seeing continued recovery from the volatility of the COVID-19 pandemic and the return keeping pace with that of the longer-term rate of return. However, during the second half of the financial year concerns around rising inflation, the gradual increase of interest rates from record lows and the unexpected invasion of Ukraine by Russia during February spooked investors and significant volatility returned to investment markets. This volatility ultimately eroded the returns seen during the first half of the year and generated a significant unrealised loss during the second half of the financial year.

In the year ended 30 June 2022, the overall investment return on investments was negative 10.3%, equivalent to a loss of £8.2 million, compared to a long-term rate of 3.2%. The best performing asset class was fixed interest investments, with a return of negative 4.1% before investment management expenses.

Table 2: Investment portfolio by asset class

Asset Class	2021/22 Amount (£m)	2021/22 % of portfolio	2020/21 Amount (£m)	2020/21 % of portfolio
Equities	26.4	36%	34.3	40%
Government bonds	22.2	30%	22.8	27%
Corporate bonds	25.7	35%	26.4	31%
Cash	(0.0)	0%	1.9	2%
	74.3	**100%**	**85.5**	**100%**

Table 3: Investment return by asset class

Asset class	Total (£) 2021/22	Total (£) 2020/21
Equities	(4,044,815)	7,047,890
Government bonds	(930,259)	157,754
Corporate bonds	(3,299,093)	864,043
Cash	(2,888)	(7,112)
Investment management expenses*	10,776	(10,160)
	(8,266,279)	**8,052,415**

*Investment management expenses are charged to the Association on an annual basis based on the total value of investments under management.

B.4. Performance from other activities

As noted in B.1., the Association is not involved in any other activities.

B.5. Any other information

The Association considers that no other material information requires to be disclosed.

C. System of Governance

C.1 General information on the system of governance

C.1.1. Overview

C.1.1.1. Board structure

The Board

The Board of Directors of the Association is responsible for all strategic aspects of the business of the Association. In practice, it delegates some of its authority to sub-groups, and delegates responsibility for the day-to-day management of the Association to the Managers. The Managers are responsible for ensuring that appropriate information, which is adequate to enable the Board to discharge its duties and to oversee the business effectively, is provided on a timely basis. There are nevertheless a number of matters that are reserved exclusively for the Board, set out below, which are reviewed and updated at least annually.

Decisions regarding the following matters are reserved for the Board:

- policy year and call recommendations;
- rule changes;
- reinsurance;
- membership;
- risk and compliance;
- release calls;
- report and financial statements;
- SFCR;
- appointment of Auditor;
- remuneration of Auditor, Directors and Management Fee;
- D&O insurance;
- appointment and retirement of Directors; and
- approval of critical and important outsourcing arrangements and regulated roles that are specific to the Association.

The Board meets four times a year and comprises an independent non-executive chairman, up to twelve non-executive directors drawn from its Members, and two executive directors nominated by the Managers.

The Board's Terms of Reference are reviewed and updated at least annually.

The Committee

Each Member Firm is entitled to nominate one of its partners or directors to sit on the Association's Committee. Members of the Committee meet twice each year, in March and September. All non-executive directors of the Association are also members of the Committee. Firms represented on the Association's Board are entitled to nominate a second Committee Representative should they wish to do so. The Committee does not carry out any regulated functions.

Sub-groups of the Board

There are four sub-groups of the Board: the Audit Group, the Remuneration Group, Nominations Group and the Investment Strategy Group.

Audit Group

The Audit Group comprises four non-executive directors of the Association (not being directors nominated by the Managers), one of whom is the Chair of the Association 'ex officio'. The duties of the Audit Group are to review and advise the Board in relation to the report and financial statements, the SFCR to the PRA, internal and external audit, and the robustness of internal financial systems and controls. The Audit Group meets three times a year and receives regular reports from the Managers, and from the Association's internal and external auditors.

Remuneration Group

The Remuneration Group comprises four non-executive directors of the Association (not being directors nominated by the Managers), one of whom is the Chair of the Association 'ex officio'. The duties of the Remuneration Group are to review and advise the Board annually in relation to the fee paid to the Managers and remuneration paid to the non-executive directors. The Remuneration Group meets at least once a year.

Nominations Group

The Nominations Group comprises the Chair of the Association 'ex officio', two other non-executive directors of the Association and one of the directors nominated by the Managers. The Nominations Group is responsible for reviewing and making recommendations to the Board in relation to suitable candidates for appointment or re-appointment as directors of the Association, candidates for appointment to regulatory roles and the appointment and re-appointment of the Chair of the Association. The Group also monitors the overall performance and collective skills of the Board and its sub-groups. The Nominations Group meets at least twice a year.

Investment Strategy Group

The Investment Strategy Group consists of the Chair of the Association 'ex officio' and three non-executive directors of the Association. The Group meets at least once a year, and monitors the ongoing performance of the Association's investments and its overall strategic asset allocation. It is also responsible for considering whether to undertake a periodic review of the Association's wider investment strategy, taking into account the Association's economic capital benchmark, technical provisions, risk appetite and target return, and for monitoring the performance of the Association's investment managers.

Other sub-groups can be established to consider ad hoc items, for example, future strategy and emerging risks.

The Association's Board and sub-group structure is supported by the effective distribution of responsibilities across holders of Senior Management Functions (SMFs) and other Certification Functions (CFs). The Association's integrated responsibility and corporate governance model is recorded in its Management Responsibilities Map.

The Association's governance map and organisational chart provide a pictorial representation of the information described above (see **Appendix A**).

C.1.1.2. Key functions

The Managers

The Association has no direct employees and as such the Board relies on the Managers for day-to-day management functions. In accordance with the rules in the Conditions Governing Business part of the PRA Rulebook and the Solvency II Directive, the following business functions have been designated as Key Functions: Compliance, Risk Management, Internal Audit and Actuarial. All of these functions are provided by the Managers.

Compliance function

The Compliance function is responsible for:

- identifying, assessing, monitoring and reporting on the Association's regulatory risk exposures;
- assessing the possible impact of legislative change and conducting assurance activity to monitor the appropriateness of compliance procedures against market good practice; and

- assisting, supporting and advising the Association in fulfilling its responsibilities to manage compliance risks.

The Chief Risk Officer (CRO) is responsible for day-to-day monitoring of, and reporting to the Board on, all compliance related matters.

Risk Management function

The risk management function is responsible for:

- setting the overall risk management and strategic framework;
- identifying, managing, monitoring and reporting on current and emerging risks; and
- monitoring and assisting in the effective operation of the Association's risk-management framework and maintaining an accurate view of the Association's risk profile.

The CRO manages the day-to-day risk monitoring of, and reports to the Board on, all aspects of risk management.

Internal Audit function

The Association's internal audit function operates a risk-based internal audit cycle to provide assurance over the appropriateness, operation and effectiveness of the system of governance including the internal control system.

Internal Audit's remit covers review of the Association's processes and controls, how these are being adhered to and implemented by all business areas and the timing and frequency of management reporting. Corporate governance is also subject to an annual review by internal audit.

The Internal Audit function reports findings and recommendations, deadlines for and progress with completion and assigned action owners, to the Audit Group.

Actuarial function

The Managers have an in-house actuarial team which carries out the day-to-day actuarial activity, including the review of claims reserving and maintenance of the Association's internal models. The Chief Actuary reports to the Board and the Audit Group on technical provisions, reinsurance and underwriting policy, and also contributes to the risk management function.

Segregation of responsibilities

All the designated key functions are provided with the necessary authority, resource and independence that they require to fulfil their roles effectively. They each report to the Association's Board either directly or through designated Board sub-group. Their reports are standing items on the Board and sub-groups' agendas.

The Investment Managers

Investment of the Association's funds is conducted by the Investment Managers in accordance with the Board's Investment Policy and is subject to internal compliance procedures.

C.1.2. Material changes to the system of governance

There have been no material changes to the system of governance during the reporting period.

C.1.3. Remuneration

The Association has a Remuneration Policy which sets out the principles and procedures under which the Remuneration Group operates.

The Association's key functions and services, with the exception of those provided by the non-executive directors, are provided by the Managers.

The Association's Remuneration Group agrees the management fee in accordance with the provisions of the Management Agreement. The fee is paid on a quarterly basis and no element of it is variable by reference to the Association's financial performance. TRC received £5,660,831 (2021 - £5,390,000) in respect of general management fees and risk management services.

The Association's Chair receives a fixed fee paid monthly in arrears. Other non-executive directors (except for the two Manager directors) receive an annual fee, with the non-executive directors who serve on any of the sub-groups receiving additional fees to reflect their additional responsibilities. These fees are paid in arrears monthly or at the end of each financial year. The level of remuneration is considered annually by the Remuneration Group, which makes recommendations to the Board. The two Manager directors receive no remuneration directly from the Association but are remunerated by the Managers.

No remuneration paid by the Association to its non-executive directors is based on the performance of the Association. The non-executive directors of the Association received remuneration of £159,984 (2021 - £150,536) for services rendered to the Association during the year. There have been no material changes to the remuneration policy compared to the prior year.

C.1.4. Related party transactions

The Board, comprising the Chair, up to 12 representatives of the membership of the Association and two Manager nominees, is appointed to oversee the management of the Association on behalf of the Members. However, because of the mutual nature of the Association, all Members, being both insurer and insured, are in effect related parties.

The Association, which is limited by guarantee, has no share capital and is controlled by the Members, who are also its insureds. All Members enter into insurance contracts negotiated with the Association's managers on arm's length terms. These transactions are therefore with related parties and are the only transactions between the Association and its Members.

C.2. Fit and proper requirements

The Association has well established procedures in place to ensure that all Certification Function holders remain fit and proper to carry out their duties and to discharge their responsibilities. In particular these individuals must:

- meet the requirements of the Managers' 'fit and proper' test and ethics policy;
- be capable of meeting their Prescribed Responsibilities; and
- report anything that could affect their ongoing suitability.

When considering an individual's fitness and propriety the following factors are considered:

- their competence and capability;
- their integrity and reputation; and
- their financial soundness.

When assessing an individual's competence and capability to take on a Certification Function role, all relevant matters are considered prior to their appointment. These include a review and assessment of:

- the competencies and capabilities required to fulfil the intended role. This is assessed throughout the recruitment process, particularly through interviews and using a Skills Matrix;
- the experience of the candidate and any additional training required; and
- whether the candidate's reputation would suit the role for which they are being considered, bearing in mind the factors set out within the FCA Handbook section 2.1.3 on fitness and propriety.

Fitness and propriety checks are made before an individual is appointed to carry out a Certification Function and periodically thereafter. These include:

- with the consent of the candidate, the completion of civil and criminal record checks through the use of a third-party provider;

- checking the veracity of any professional or other qualifications that are relevant to the role being applied for;
- obtaining references from the candidate's former employers; and
- consideration of any disclosures made by candidates (full supporting documentation will also be requested).

In determining a candidate's financial soundness, the following factors will be taken into account:

- any judgment debt or award in the United Kingdom or elsewhere;
- whether this remains outstanding or was not satisfied within a reasonable period; and
- whether the individual has made any arrangements with creditors, filed for bankruptcy, had a bankruptcy petition served on them, been the subject of a bankruptcy restriction order or any other related matter.

Prior to consideration for appointment, all directors of the Association complete a self-assessment of their skills, experience and capabilities relative to the responsibilities assigned to them under the new role. The results, which are added to the Skills Matrix maintained for all Directors, are reviewed by the CRO, discussed as necessary with the individuals concerned and fed into individual training and further recruitment plans.

Refer to **Appendix A** for a listing of the persons of the Association that are responsible for the key functions.

C.3. Risk management system

The oversight of risk and the underlying corporate culture is fundamental to the future operations and success of the Association. It is an integral part of this approach that each individual is aware of the Association's aims and objectives and how they are achieved. The Board of the Association has a clear responsibility to understand the risk management activities of executive management.

It is a primary function of the Association Board and senior management to establish the Association's risk appetite and tolerances and to put in place the philosophy, structures, tools and methods to drive the risk management approach throughout the Association. It is vital in the discharge of its governance responsibilities that the Board understands inherent risks and the way these are measured, monitored, assessed and mitigated by management.

The Audit Group has delegated responsibilities from the Board to oversee the Internal Control Framework including the oversight of Internal Audit, External Audit, the Compliance Framework and Financial Reporting.

All individuals involved with business operations that allow the Association to manage risk, including control owners, are expected to be aware of the Association's approach to risk management. This is also the expectation of regulators and so those individuals that lead risk assessments or manage material controls or outsourced activities are considered by the Association to be certification functions (roles that could cause significant harm) and are consequently subject to enhanced due diligence by the Managers.

Key Risks and Mitigants

The key risks faced by the Association and the associated mitigants will be as follows:

Underwriting Risk

Underwriting risk which arises from two sources – adverse claims development (reserve risk) and inappropriate underwriting (premium risk). Reserve risk is managed by the Association's policy of setting prudent reserves for individual claims (evidenced by the release of redundant reserves shown in the financial statements) and frequent reviews of estimates, including oversight of large claims by senior claims directors. Prudent incurred but not enough reported (IBNER) reserves are also maintained.

Premium risk is managed by having in place a clear underwriting philosophy, procedures and controls in relation to pricing, rigorous selection criteria for the admission of new Members and diversification of risks. Reinsurance is also used to mitigate underwriting risk. Reinsurance may also be used in respect of certain risks where additional protection is deemed appropriate.

Market Risk

Market risk refers to the risk of losses on the Association's investment portfolio arising from fluctuations in the market value of the underlying investments. There is a clear investment strategy which is subject to regular review. The principal objectives are to match investments with the claims liabilities in terms of duration, to hold a diversified portfolio of investment types with high quality fixed interest government securities and hold appropriate levels of corporate bonds and equities and, within that overall context, to maximise the return generated at an agreed level of risk.

Credit Risk

Credit risk arises from the possibility of default by one or more counter-parties which may include, reinsurers, deposit takers and Members. This risk is managed by undertaking appropriate due diligence on prospective counterparties. This may include carrying out financial checks on prospective Members, reviewing credit ratings for reinsurers and monitoring these over time, restricting exposure to individual deposit takers and operating a robust credit control regime.

Operational Risk

Operational risk covers the risks arising from the failure of internal processes, people or systems or from external events. A comprehensive Procedures Manual covers every material aspect of management of the Association.

Risk Management Framework

The risk management framework helps the Board deliver the Association's strategic objectives; it is managed by the Risk function and overseen by the Association's Board.

The Risk function is responsible for:

- identifying, managing, monitoring and reporting on current and emerging risks;
- setting the overall risk management and strategic framework; and
- monitoring and assisting in the effective operation of the Association's risk management framework and maintaining an accurate view of the Association's risk profile.

The Association's risk management policy sets out how the risk management framework supports the principles and characteristics of the Association when managing its strategic objectives, risk appetite and capital needs along with the necessary supporting culture. The policy also sets out how operational elements are devolved to the Managers while oversight is retained by the Directors.

The Association exists to benefit its Members which requires maintenance of financial strength to ensure that claims can be met in extreme circumstances and that unbudgeted Calls are avoided. The Association needs to be measured when taking, managing and monitoring risks that pose a threat to its longevity, strategic objectives and capital position.

It is important that the Association's risk management framework considers:

- the wider risks to its Members business model as well as the more traditional risk management considerations expected from insurers under Solvency II;
- a proportionate approach to risk management that is reflective of the nature, scale and complexity of the Association's operations, especially considering the monoline nature of its business; and
- transparency and accountability between the Association and the Managers.

The policy sets out a number of standards that help the Association achieve these targeted outcomes:

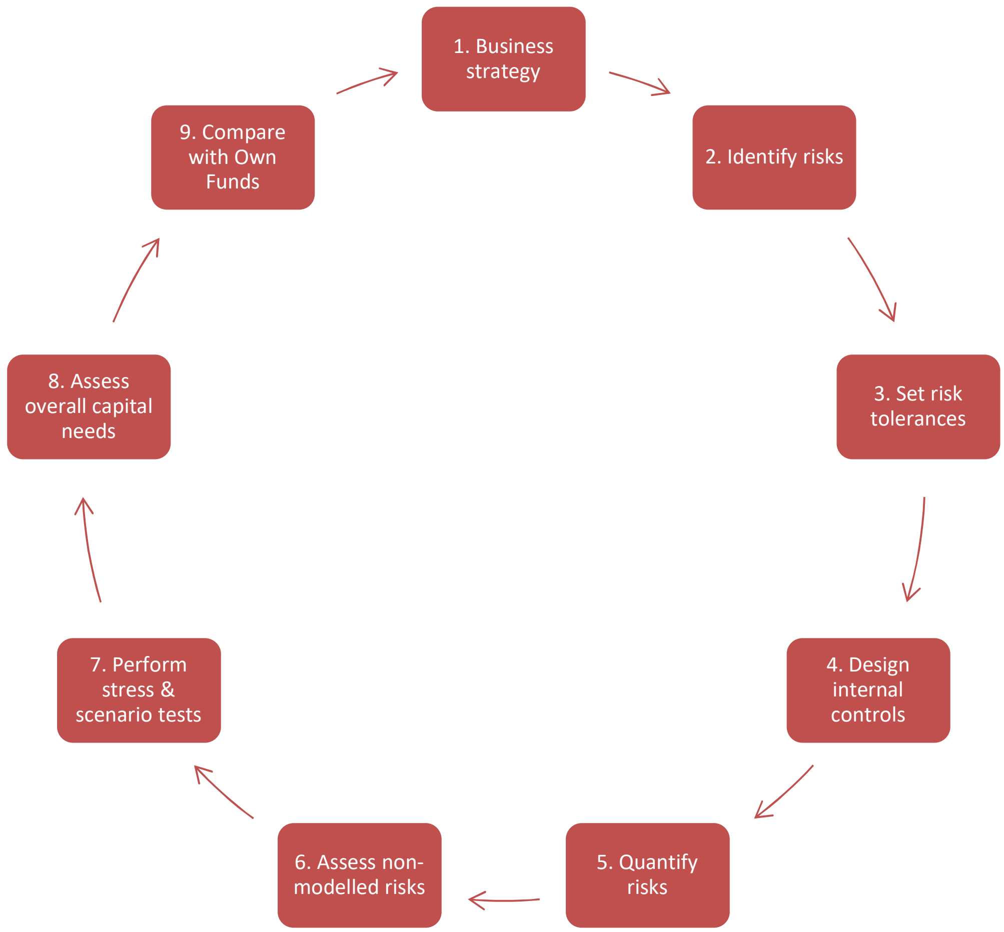
- **Identify** - Maintain a risk register of all significant risks to the Association aligned with one of the available risk categories and the “material” / “important” controls that are used to manage these risks. Ensure completeness of the risk universe and the controls environment, regularly back testing against results and reviewing risk incidents. The main management tool used by the Association to assist in assessing the systems and controls is a comprehensive risk register.
- **Assess** - Assess the impact of all risks in the Risk Register at the 1-in-10 and 1-in-200 confidence level using a score of 1 - 5. Assess the effectiveness of the controls supporting risks (through self-attestation).
- **Monitor** - Measure the current risk exposure against the Board’s risk appetite as set out in the Risk Appetite Statements and as devolved into Risk Limits, Key Control and Key Risk Indicators.
- **Respond** - Where there are instances of risk taking outside the Board’s expectations (outside risk appetite), ensure Board approved remediation actions are executed in a timely manner.
- **Report** - Report exceptions to the Board where the risk profile is outside the Board’s Risk appetite or material controls are not operating in line with expectation. The reporting should also consider risk incidents, emerging risks and updates on remediation actions. At least annually, prepare an Own Risk and Solvency Assessment (ORSA) report, summarising the results of all risk management activities (ORSA process).
- **Risk Incidents** - Capture all risk incidents (unexpected events that cause, or nearly cause, a financial or reputational impact due to a failed control or unforeseen exposure) and update the processes and control environment in order to avoid repetition.
- **Emerging risks** - Be forward looking in risk identification and consider risks that may emerge for the Association due to internal or external change.

C.4. Own Risk and Solvency Assessment (ORSA)

The ORSA is carried out in accordance with the Association’s ORSA Policy (the Policy). The Policy sets out required standards and guidance for conducting the ORSA process and reporting to ensure all relevant regulatory and business requirements are continuously met. The purpose of the Policy is to assist the Board in implementing consistent processes to demonstrate the link between business strategy, risk appetite, risk profile and solvency needs. The Policy is reviewed and approved annually by the Board.

The ORSA process, which incorporates the risk monitoring and reporting activities performed by the Association’s Key Control Functions, operates continuously throughout the year as part of day-to-day business operations. Outcomes of the process and conclusions drawn are recorded in an annual report presented to and signed off by the Board. Key steps within the ORSA process are set out in Chart 1 below.

Chart 1: Summary of ORSA process



From a strategic perspective, the annual ORSA report provides the Board with a comprehensive assessment of the capital required to meet the Association's strategic objectives over the next three years, based on its projected business plan and the risk profile this generates. From an operational point of view, ORSA processes and results are used to inform and support the Board when making key decisions, for example on calls on Members, returns of call, pricing, reinsurance purchase and investment strategy.

The 2022 ORSA includes an assessment of both the economic and regulatory capital position of the business projected to 30 June 2022 and for the next three years by reference to the Economic Capital Benchmark (ECB), SCR and MCR.

The ECB defines the amount of capital that must be held to implement the business strategy for the next three years to cover the risk of losses from all potential sources. The risk appetite (or ECB requirement) is set at the 99.5th level of confidence.

The SCR defines the amount of capital that the Association must hold to satisfy regulatory requirements. The benchmark set for the SCR is also at the 99.5th level of confidence, but measured over a one-year time-horizon.

The MCR, which represents the absolute minimum level of capital that the Association must hold to avoid regulatory action, is also measured over a one-year period but reflects the 85th level of confidence.

The Association has used the Solvency II Standard Formula to calculate its SCR and MCR.

The annual ORSA report is reviewed by the Board to ensure that it is accurate and provides the necessary information for capital allocation and strategic planning purposes. Once the Board is satisfied, it approves the report which is then submitted to the PRA.

The ORSA report is produced annually, which is consistent with the stable nature of the Association's capital needs over time. The ORSA may be undertaken more frequently if specific triggers occur which are set out in the Policy. However, none of these events has occurred since the last ORSA was prepared.

C.5. Internal control system

The Association's internal control system refers to a combination of activities carried out to eliminate or reduce the likelihood of risks materialising that are beyond the level of risk appetite considered within business plans and strategy.

Activities include:

- control management undertaken by the business, including half-yearly control attestations provided to the CRO as part of the risk register update. Each identified control owner attests to the performance and effectiveness of their control environment over the previous six months. The CRO reports the results and any associated recommendations every six months to the meetings of Wren Managers and to the Board at the corresponding meeting;
- annual review and re-assessment of the Association's key risks by relevant risk owners, independently challenged by the CRO and reported to the Managers and to the Board half-yearly;
- annual stress and scenario testing (including reverses stress tests) of the assumptions within the business plan to determine the financial, reputational, operational and capital impact of extreme adverse events. An agreed set of tests relevant to the Association's business plan and strategy are run by relevant members of the Finance and Actuarial Functions, reported to the CRO and included within the annual ORSA report;
- annual review of capital calculations, including underlying assumptions and associated projections by the Actuarial team;
- annual review and assessment of the effectiveness of the Association's risk management framework by the CRO;
- regulatory guidance, 'horizon scanning', recording and quarterly reporting of operational losses (actual, potential and near misses) and compliance breaches to the Board;
- half-yearly compliance monitoring and reporting to Wren Managers and the Board; and
- independent assurance reviews conducted by Internal Audit.

Where control deficiencies exist, remedial actions, the person responsible for taking them and the timeframe within which the control deficiency will be addressed, are recorded and monitored by the CRO.

The Association is required to establish and implement the compliance activities necessary to demonstrate that it meets its regulatory expectations. These activities should be proportionate to the nature, scale, risk and complexity of the business. There are seven key areas in which the Compliance Function operates:

- The compliance system must make use of the "three lines of defence" model where the:
    - 1st Line: Business roles that are primarily responsible for achieving defined regulatory outcomes;
    - 2nd Line: The Risk and Compliance function, providing an independent view on the performance against risk and compliance activities. There could be times when the Risk and Compliance team will lead on regulatory obligations and will act as a "1st line" role, but this should be minimised;
    - 3rd Line: The Internal Audit function, providing independent assurance to a Non-Executive Director via the Audit Group.
- Identify all necessary controls for the business to demonstrate compliance with the regulatory responsibilities of the Managers and the Association in a proportionate manner, in line with the nature, scale and complexity of the business.

- Establish processes to regularly review and update the areas in scope of the compliance manual and the business controls, as necessary, to reflect any changes in the regulatory requirements, statutory requirements or changes in the nature, scale or complexity of the business activities.
- Create awareness of the business controls expected to be operated by various business teams, particularly following a change in the controls listed.
- Integrate controls within the Risk Registers for the Managers and the Association as appropriate.
- Perform on-going compliance monitoring and report findings to the senior management and the Board via the Compliance Dashboard.
- Escalate exceptions to the relevant Group, Managers' Board or the Association's Board.

The key elements of the compliance system are:

- Identifying internal (following projects) and external change (horizon scanning) to the status quo.
- Assessing the updates required from time to time to compliance activities
- Monitoring the effectiveness of the compliance activities as part of the compliance dashboard
- Responding to exceptions in a timely manner through appropriate management action.

C.6. Internal Audit function

Internal Audit, provided by the Managers on behalf of the Association, provides independent assurance, advice and insight to the Board, designed to add value to the business and improve its operational effectiveness. It helps the Association to accomplish its objectives by bringing a systematic, disciplined approach to the evaluation of the effectiveness of its governance, risk management and control processes.

The Internal Audit Function is governed by written Terms of Reference, setting out the function's role, mandate, independence and authority to act. The internal audit function is responsible for preparing:

- an internal audit universe based on the risks within the Association's risk register;
- a five-year strategic internal audit plan using a risk based approach for the timing and frequency of intended reviews; and
- an annual internal audit programme taking into consideration previous audit findings or issues arising from the occurrence of material unexpected losses, regulatory breaches or incidents involving financial crime as well as in response to feedback from regulators and management.

The internal audit universe and the annual internal audit programme are presented at each meeting of the Audit Group.

The internal audit function and holder of the associated regulatory role for the Association under the Senior Managers Regime, reports all findings and recommendations arising from the review work performed, to the Audit Group at each meeting and has regular discussions with the chairman of the Audit Group between meetings. Included within the internal audit function's reports is an update on the implementation by assigned individuals of previous recommendations. Material issues not addressed within agreed timescales are escalated to the Board.

The internal audit function has no direct operational responsibility or authority over any of the activities audited and is not permitted to implement internal controls, develop operational procedures, prepare records or engage in any other activity that may impair its judgement. The internal audit function is obligated to report to the Audit Group any interference and related implications in determining the scope of internal audit reviews, performing work and communicating results.

The internal audit function is independent from the organisational activities audited and free to exercise its assignments without impairment and on its own initiative in all areas. The internal audit function reports directly to the Chair of Audit Group.

C.7. Actuarial Function

The Association's Actuarial Function is made up of an internal actuarial team headed by a Chief Actuary employed by the Managers.

The Actuarial Function's organisation is designed to provide the Association with the necessary 'Approved Person' role and flexible actuarial support, whilst enabling the Managers to maintain operational control of the work performed.

The internal actuarial team reports to the Managers' CFO. The Actuarial Function has responsibilities for the calculation of the Association's reserves and Solvency II technical provisions, its capital modelling and for providing analytical support to underwriters.

In accordance with Article 48 of the Solvency II Directive, The Chief Actuary has four main duties:

- to assess the appropriateness and adequacy of the Association's Solvency II technical provisions;
- to provide an opinion on the underwriting policy;
- to provide an opinion on the adequacy of reinsurance arrangements; and
- to contribute to the Association's risk management.

C.8. Outsourcing

Outsourcing is the use of a third party (either an affiliated entity within the same group or an external entity) to perform activities on a continuing basis that would normally be undertaken by the Association. The third party to whom an activity is outsourced is a 'service provider'.

The Association's approach to outsourcing is governed by the principles and standards set out in its Outsourcing Policy. This Policy acts as a guide to the Managers for assessing the materiality of risks associated with outsourcing any given activity or service and the steps that must therefore be taken to mitigate and manage this risk effectively.

The Policy establishes two fundamental principles:

- that the decision to outsource activities assessed as Critical (C) or Important (I) to the Association will be reserved for the Board; and
- the control framework through which outsourcing benefits and risks are assessed, controlled and monitored will be sufficiently robust to ensure that the Association's outsourcing arrangements will give advantage in practice.

Outsourcing is categorised as C or I if it would jeopardise adherence to the regulators' Threshold Conditions, which are required for the Association to maintain its UK regulatory authorisation. The assessment of materiality determines at the outset whether the nature of the outsourced arrangement will make it C or I, after which the same stages for approval will be followed, although proportionate to the nature and materiality of the activities to be outsourced.

The starting point is to compare the potential benefits with the foreseeable risks, to see whether there is sufficient value in the proposition to go through a tender process. The scoring used in this viability check to assess whether the benefits outweigh the risk, is set out as an appendix to the Outsourcing Policy.

Once the viability check is passed, the business sponsor will arrange for specific due diligence on a number of providers before presenting a value proposition and preferred service provider to either Wren Managers' Board or, for C and I arrangements, the Board of the Association, for consideration and approval. The necessary due diligence, minimum contractual terms and approval process to be followed are set out in various appendices to the Outsourcing Policy and designed to ensure that:

- adequate review and assessment has been carried out on the impact of the outsourcing on the Association's risk profile and contingency plans in the event of service failure by the selected provider;

- the selected service provider has the ability, capability and legal authority to meet the Association’s business requirements and is free of any conflicts of interest relevant to the outsourcing;
- the service provider is financially sound, professionally competent, appropriately experienced and has adequate insurance cover to meet its contractual obligations;
- contracts between the service provider and the Association setting out the duties and responsibilities of both parties are signed-off by appropriately authorised signatories and comply with all relevant legal and regulatory requirements;
- control mechanisms established by the Managers for monitoring the performance and quality of services provided by a third party are commensurate with the nature and materiality of the risk to which they expose the Association; and
- the outsourcing does not impair the Association’s systems of governance or increase the level of operational risk.

The Association’s C and I outsourcing arrangements relate to:
- the appointment of its Managers; and
- the management of its investments by the investment manager, Mercer.

The Board bears ultimate responsibility for outsourced functions, services, or activities and related governance.

C.9. Adequacy of system of governance

The Board considers that the System of Governance is appropriate for the nature, scale and complexity of the inherent risks facing the Association.

C.10. Any other information

The Association considers no other information material to be disclosed.

D. Risk profile

The Association is focused on the identification and management of exposure to risk through its core activity as a provider of insurance services. The key areas of risk faced by the Association can be classified as follows:

- Underwriting risk – incorporating premium and reserving risk;
- Market risk – incorporating equity risk, interest rate risk, spread risk and currency rate risk;
- Counterparty default risk – being the risk that a counterparty is unable to pay amounts in full when due;
- Liquidity risk - being the risk that cash may not be available to pay obligations as they fall due;
- Operational risk – being the risk of failure of internal processes or controls; and
- Strategic risk – being the risk that strategy is poorly set, executed or is unresponsive to external developments.

The Association manages these risks through the half-yearly Risk Register update, which uses metrics to monitor risk outcomes and control effectiveness and receives attestation on less significant controls from Risk Owners. Risk outcomes are compared with the results of the Association's SCR, outcomes of stress and scenario testing, self-reported Risk Incidents and Internal Audit findings to ensure that a rounded consideration of the Association's risk profile is provided to the Managers and to the Board.

The assumptions underlying the Solvency II Standard Formula SCR are considered to, be a good fit, generally, with the Association's risk profile.

Table 4: Split of SCR by risk category

Key areas	2022 % of SCR	2021 % of SCR
Underwriting risk	59.9%	56.3%
Market risk	33.7%	38.7%
Credit risk	2.2%	1.1%
Operational risk	4.2%	3.9%

D.1. Underwriting risk

The Association provides Members with cover for professional indemnity risks. The Association sets a projected level of Call based on a target confidence level, such that the call and investment income are expected to be sufficient to meet net claims incurred over the full development of the policy year. The development of claims is monitored on a quarterly basis by Wren Managers and the Board of the Association.

Reinsurance

The excess of loss programme reduces the impact of individual large losses on the Association. The Association retains the first £3m of every claim , except in the case of a cladding claim, above which the market reinsurance arrangements respond up to the £20m maximum limit of cover. In respect of losses arising from cladding claims, the Association retains the first £2m in the aggregate per Member per policy year and can claim up to £3m in the aggregate per Member per policy year with reinstatements available. These risk tolerances are set by the Board.

Management of claims cost – Member risk management

The Association's strategy is to help its Members to prevent and avoid the occurrence of incidents while ensuring the efficient handling and management of claims when they do occur. To facilitate this strategy, the Association has established programmes to ensure high levels of claims management and to reduce claims risk. This includes an extensive Member risk management programme comprising a regular cycle of visits and reviews, where potential risk areas are identified, particularly those arising from new areas of practice, and measures are recommended for their control.

Reserving process

The Association establishes provisions for unpaid claims, both reported and unreported, and related expenses to cover its expected ultimate liability. These provisions are established through the application of actuarial techniques and assumptions and the key methods used by the Association in estimating liabilities are the chain ladder, Bornhuetter-Ferguson and gaining insight from the Claim Handlers. The results are presented to the Managers' Reserving Committee, which meets at least twice a year to review and challenge the setting of reserves. They are reviewed annually by the Audit Group. In order to minimise the risk of understating these provisions, the assumptions made and actuarial techniques employed are reviewed in detail by senior management.

The Association considers that the liability for insurance claims recognised in the statement of financial position and the Solvency II balance sheet is prudent, understanding that actual experience will differ from the expected outcome.

Sensitivity testing of underwriting risk

The Association carries out sensitivity testing on its claims reserves, the result of which is shown below. Where results of sensitivity testing are provided, they show the impact on surplus/(deficit) before tax, gross and net of reinsurance. For each sensitivity results shown in this report, the impact of a change in a single factor is shown, with other assumptions unchanged.

The sensitivity analysis assumes that a change in loss ratio is driven by a change in claims incurred and that there are no reinsurance recoveries, and has been calculated excluding the impact of returns of call where applicable.

Table 5: Impact of an increase in loss ratio by 5 percentage points

	2022 £	2021 £
Gross	959,125	995,306
Net	789,150	843,269

A 5 percent decrease in loss ratios would have an equal and opposite effect.

D.2. Market risk

Market risk is the risk of adverse financial impact as a consequence of market movements such as currency exchange rates, interest rates and equity price changes. Market risk arises due to fluctuations in both the value of assets and liabilities.

The investment strategy, which is reviewed periodically by the Investment Strategy Group, is set by the Board with the assistance of external investment consultants. The strategy reflects the risk appetite of the Association and is designed to maximise return whilst holding risk at a level deemed acceptable. The policy allows the investment managers to invest a proportion of the portfolio in assets which carry a greater risk but potentially higher return, such as equities, with the majority being held in investments such as government bonds, corporate bonds and cash.

The asset allocation of the investment portfolio is monitored by the Managers. Where an asset class exceeds its permitted range, the investment managers will be instructed to carry out a rebalancing exercise, in order to restore the allocation to the correct position.

The prudent person principle

Under the Association's investment policy, all of its investments are invested and managed in accordance with the 'prudent person principle', meaning the duties of the Investment Managers are discharged with the care, skill, prudence and diligence that a prudent person acting in a like capacity would use in the conduct of an enterprise of like character and aims. More specifically the portfolio:

- is invested in assets and instruments whose risk can properly be identified, measured, monitored, managed, controlled and reported;
- ensures the security, quality and liquidity of the portfolio as a whole;
- is appropriate to the nature, currency and duration of the Association's insurance liabilities;
- includes derivative instruments only where they contribute to a reduction of risks or efficient portfolio management and; only a prudent level of unlisted investments and assets;
- is diversified to avoid excessive reliance on any asset, issuer or group, or geographical area.

The funds are invested by the Investment Managers in accordance with parameters set by an Investment Mandate. The Investment Mandate provides a framework to the Investment Managers for the management and stewardship of the investment assets in conformity with the business and investment objectives and sets the parameters within which the Association's assets may be invested. It is considered and approved by the Board on an annual basis and ad hoc as required and is subject to the Association's Investment Policy. The Investment Managers report to the Board at each meeting.

Interest rate risk

Interest rate risk is the risk that the fair value of future cashflows of a financial instrument will fluctuate because of changes in interest rates. Interest rate risk arises primarily from the nature and term of investments held and is managed through the buying and selling of appropriate fixed interest securities of different durations.

The Association uses a number of sensitivity management tools to understand volatility of surpluses/deficits.

Table 6: Impact of an increase or decrease in interest rates

	2022 **£**	**2021** **£**
0.5% increase in interest rates	24,860	24,381
0.5% decrease in interest rates	(24,860)	(24,381)

Equity price sensitivity analysis

The Association is exposed to price risk through its holding of equities. The exposure through equities is limited to a controlled proportion of the overall portfolio. At the year end the holding in equities was 35% (2021 - 40%) of the investment portfolio. The value of the equity holding at the year end amounted to £26.4m (2021 - £34.3m)

Table 7: Impact of 5% change in investment market values from a 5% increase or decrease in underlying prices

	2022 £	2021 £
5% increase in equity price	1,319,867	1,716,335
5% decrease in equity price	(1,319,867)	(1,716,335)
5% increase in corporate bond price	1,283,295	1,322,357
5% decrease in corporate bond price	(1,283,295)	(1,322,357)
5% increase in fixed interest price	1,109,722	1,138,214
5% decrease in fixed interest price	(1,109,722)	(1,138,214)

The table above demonstrates the effect of a change in a key assumption while other assumptions remain unchanged. It should be noted that these sensitivities are non-linear, and larger or smaller impacts should not be extrapolated or interpolated from these results. Management actions could include selling investments, changing investment portfolio allocation and taking other protective action. In addition, the financial position of the Association may vary at the time that any actual market movement occurs.

D.3. Credit risk

Credit risk refers to the risk that a counterparty will default on its contractual obligations resulting in financial loss to the Association.

The key areas where the Association is exposed to credit risk are:

- amounts recoverable under reinsurance contracts;
- amounts due from Members; and
- counterparty risk with respect to cash and investments.

Amounts recoverable on reinsurance contracts

The Association is exposed to credit risk from a counterparty failing to comply with its obligations under a contract of reinsurance.

The excess of loss reinsurance programme is placed through Gallagher Re, a Lloyd’s broker. The Association has set selection criteria whereby each reinsurer is required to hold a credit rating of at least “A-” at the time the contract is made. The reinsurance is placed with Lloyd's and company market underwriters. This is monitored by the Board.

Amounts due from Members

Amounts due from Members represents calls owing to the Association in respect of insurance business written. The Association manages the risk of Member default through a screening process to ensure the quality of new entrants to the Association and the ability to suspend cover and outstanding claims recoveries to Members that fail to settle amounts payable. The Association's policy is that Members should have paid all outstanding calls within 30 days. Amounts written off as bad debts have been minimal over recent years.

Counterparty risk with respect to cash and investments

The average ratings of the funds are monitored by the Association's Investment Strategy Group, with assistance from Mercer. The fund credit ratings allocated by Mercer and the underlying credit ratings of the investments held within the funds are reviewed by the Group to ensure that materially all investments are at least rated at investment grade. The Group also ensures that Mercer monitors the underlying investments to limit the risk of default.

Table 8: Credit risk exposure by asset category

	2022 £	2021 £
Corporate bond investments	25,665,899	26,447,149
Fixed interest investments	22,194,446	22,764,271
Equity investments	26,397,345	34,326,696
Reinsurers share of technical provisions	3,917,000	5,155,000
Member and other debtors	512,372	95,228
Deposits with credit institutions	(0)	1,920,120
Cash at bank	8,458,270	7,478,967
Total financial assets bearing risk	**87,145,332**	**98,187,430**

Table 9: Credit risk exposure by rating band

	2022 £	2021 £
AAA	-	-
AA	-	-
A	12,375,271	12,633,968
BBB+ and below	-	-
No rating	74,770,061	85,553,462
Total financial assets bearing risk	**87,145,332**	**98,187,430**

D.4. Liquidity risk

Liquidity risk is the risk that cash may not be available to pay obligations as they fall due at a reasonable cost. The Association has adopted an investment policy which requires the maintenance of significant holdings in cash funds and short-term deposits to ensure sufficient funds are available to cover anticipated liabilities and unexpected levels of demand. Short-term cash needs are monitored to ensure the most efficient investment of cash balances.

The following table provides a maturity analysis of the Association's financial assets representing the date that a contract will mature, amounts are due for payment or the asset could be realised without significant additional cost.

Table 10: Maturity bands by asset category

At 30 June 2022	Short term assets £	Within 1 year £	1-2 years £	2-5 years £	Over 5 years £	Total £
Quoted shares and variable field securities	26,397,345	-	-	-	-	26,397,345
Debt securities and other fixed income securities	47,860,345	-	-	-	-	47,860,345
Deposits w ith credit institutions	(0)	-	-	-	-	(0)
Reinsurers' share of outstanding claims	-	-	47,572	1,554,734	2,314,694	3,917,000
Direct insurance operations - Members	72,050	-	-	-	-	72,050
Reinsurance operations	440,322	-	-	-	-	-
Cash at bank	8,458,270	-	-	-	-	8,458,270
Accrued Interest	-	-	-	-	-	-
Other debtors and prepayments	-	-	-	-	-	-
Total assets	**83,228,332**	**-**	**-**	**-**	**-**	**86,705,010**

At 30 June 2021	Short term assets £	Within 1 year £	1-2 years £	2-5 years £	Over 5 years £	Total £
Quoted shares and variable field securities	34,326,696	-	-	-	-	34,326,696
Debt securities and other fixed income securities	49,211,420	-	-	-	-	49,211,420
Deposits w ith credit institutions	1,920,120	-	-	-	-	1,920,120
Reinsurers' share of outstanding claims	-	-	-	1,294,247	3,860,753	5,155,000
Direct insurance operations - Members	95,228	-	-	-	-	95,228
Reinsurance operations	-	-	-	-	-	-
Cash at bank	7,478,967	-	-	-	-	7,478,967
Accrued Interest	-	-	-	-	-	-
Other debtors and prepayments	-	-	-	-	-	-
Total assets	**93,032,430**	**-**	**-**	**-**	**-**	**98,187,430**

The following is an analysis of the estimated timings of net cashflows by financial liability. The timing of cashflows is based on current estimates and historic trends. The actual timings of cashflows may be different from those disclosed below. However the value of total assets are well above that of total liabilities and this would therefore not materially impact the Association.

Table 11: Maturity bands by liability category

At 30 June 2022	Short term liabilities £	Within 1 year £	1-2 years £	2-5 years £	Over 5 years £	Total £
Gross outstanding claims	-	558,472	2,753,016	20,247,798	22,423,740	45,983,027
Direct insurance operations - Members	-	9,138	-	-	-	9,138
Reinsurance operations	561,244	-	-	-	-	561,244
Taxation	-	-	-	-	-	0
Other Creditors	705,186	-	-	-	-	705,186
Total liabilities	**1,266,430**	**567,610**	**2,753,016**	**20,247,798**	**22,423,740**	**47,258,594**

At 30 June 2021	Short term liabilities £	Within 1 year £	1-2 years £	2-5 years £	Over 5 years £	Total £
Gross outstanding claims	-	793,523	4,048,860	29,452,793	22,193,223	56,488,399
Direct insurance operations - Members	-	9,138	-	-	-	9,138
Reinsurance operations	937,740	-	-	-	-	937,740
Taxation	-	993,345	-	-	-	993,345
Other Creditors	728,379	-	-	-	-	728,379
Total liabilities	**1,666,119**	**1,796,005**	**4,048,860**	**29,452,793**	**22,193,223**	**59,157,000**

Expected profit in future premiums

The Association calculates the value of expected profit in future premiums by comparing the present value of expected future cash inflows with the present value of expected future cash outflows in respect of the same business. These cashflows are evaluated in accordance with the technical provisions calculation basis requirements set out in the Solvency II Directive and Commission Delegated Regulation. As at 30 June 2021, the Association's expected profit in future premium is £0 (2021 - £0).

D.5. Operational risk

Operational risk relates to the failure of internal processes, systems or controls due to human or other error. Operational risk is tolerated, but minimised by the Managers on behalf of the Association through the application of key mitigating controls. The Association documents all key procedures and controls in a procedures manual, which is embedded into the organisation, updated on a continuous basis and is available to all staff. Compliance with the procedures and controls documented within the manual is audited on a regular basis through the internal audit function which is directed and reviewed by the Managers and the Audit Group. A staff handbook contains all key policies that have been documented. The assessment of key operational risks and associated controls is recorded in the Association's Risk Register which is updated and reported to the Board on a quarterly basis.

Operational risk is also measured through a set of risk scenarios – those scenarios used in the Association's most recent ECB calculation relate to the following operational aspects of the strategy and business model:

- reliance on third parties;
- compliance failure;
- loss of key staff;
- underwriting;
- reinsurance;
- claims;
- business interruption;
- inaccurate management information; and
- internal or external fraud.

Operational risks relating to 'people' are controlled by the Managers through succession planning; staff training; having adequate professional indemnity insurance; validation of references; background checks and the segregation of duties.

Systems are controlled through data back up; Disaster Recovery design and regular testing of the Association's Business Continuity Plan.

All key control processes are documented in the Association's various operational policies and procedure manuals. Compliance is tested and monitored by the Association's Compliance, Risk Management and Internal Audit functions and reported to the Board by the CRO and Internal Audit respectively.

D.6. Other material risks

The Association has not identified any other material risks that it considers necessary for disclosure.

D.7. Any other information

The Association considers no other information material to be disclosed.

E. Valuation for solvency purposes

This section provides information on the valuation of assets, technical provisions and other liabilities within the Association's SII balance sheet at 30 June 2022.

In accordance with SII valuation regulations the Association has valued its assets and liabilities at fair value. Fair value is the amount for which an asset could be exchanged or a liability settled between knowledgeable, willing parties in an arm's length transaction.

The Association applies the methodology and valuation hierarchy in accordance with Article 75 of the Level 1 Directive (or where specifically provided for by Delegated Acts):

- As the default valuation method the Company values assets and liabilities using quoted market prices in active markets for the same assets or liabilities;
- Where the use of quoted market prices in active markets for the same assets or liabilities is not possible, assets and liabilities are valued using quoted market prices in active markets for similar assets and liabilities with adjustments to reflect differences;
- Where these criteria are not met, alternative valuation methods are used.

E.1. Valuation of assets

The following table sets out the value of the Association's assets at 30 June 2022 and 2021.

Table 12: Valuation difference between assets held on a GAAP basis and SII basis

	2022			2021		
	Assets per GAAP £m	Assets per Solvency II £m	Variance £m	Assets per GAAP £m	Assets per Solvency II £m	Variance £m
Financial investments	74.3	74.3	-	85.5	85.5	-
Reinsurance recoverable	3.9	7.4	(3.5)	5.2	3.3	1.8
Other assets	9.0	9.0	-	7.6	7.6	-
Total Assets	**87.1**	**90.6**	**(3.5)**	**98.2**	**96.4**	**1.8**

In general, the valuation method of assets is aligned with the statutory accounts and so the basis of preparation aligns with the accounting policies outlined in the Association's annual Report and Financial Statements in note 1. Exceptions to these methods are outlined in the relevant sections below.

Investments

The Association's investments are valued for Solvency II purposes on the same basis as the annual financial statements, which follow UK GAAP. All of the Association's investments are traded on mainstream exchanges.

Reinsurers' share of technical provisions

The difference between the GAAP and Solvency II values for reinsurers' share of technical provisions reflects the difference in methodology used to calculate the underlying technical provisions under the two bases. This is set out in more detail in the Technical Provisions section below.

Other assets

The differences in the valuation between UK GAAP and Solvency II relates to the recognition of accrued interest, where applicable, which has been recognised for Solvency II purposes under Investments and for UK GAAP purposes under ‘other assets’. All other assets are valued for Solvency II purposes on the same basis as the GAAP financial statements.

There were no changes to any of the recognition criteria or valuation methods during the year.

E.2. Technical provisions

At 30 June 2022, the Association held gross technical provisions (including risk margin), valued for Solvency II purposes, of £44.3m. This is an decrease on the 30 June 2021 figure due to settlement of a number of notifications during the last 12 months.

The assessment of these technical provisions is generally based on commonly accepted actuarial techniques applied in a consistent manner. Whilst professional judgement has been exercised in all instances, projections of future ultimate losses and loss expenses are inherently uncertain due to the random nature of claim occurrences. The accuracy of the results is dependent upon the accuracy of the underlying data and additional information supplied to the actuarial teams.

The following table shows the analysis of these provisions between best estimate and risk margin at 30 June 2022 and 2021:

Table 13: Valuation difference between technical provisions held on a GAAP basis and SII basis

	2022			2021		
	Gross £m	RI £m	Net £m	Gross £m	RI £m	Net £m
Balance per UK GAAP	45.98	3.92	42.07	56.49	5.16	51.33
Prudence Margin (GAAP to BE)	1.07	6.01	(4.94)	(5.60)	(0.01)	(5.59)
Bound but not incepted (“BBNI”) business	(7.18)	(1.99)	(5.19)	(7.94)	(2.11)	(5.83)
Non-investment expenses	-	-	-	0.40	-	0.40
RI credit default	-	(0.08)	-	-	(0.02)	-
ENID	3.29	0.69	2.59	4.23	0.46	3.77
Investment expenses	-	-	-	-	-	-
Discounting	(5.56)	(1.16)	(4.40)	(1.22)	(0.15)	(1.07)
Balance per Solvency II before risk margin adjustment	**37.60**	**7.39**	**30.21**	**46.36**	**3.32**	**43.04**
Risk Margin	6.67	-	6.67	7.70	-	7.70
Balance per SII	**44.27**	**7.39**	**36.88**	**54.06**	**3.32**	**50.74**
Variance between SII and GAAP	**1.71**	**(3.47)**	**5.19**	**2.43**	**1.83**	**0.59**

Since the Solvency II technical provisions figure is a best estimate, the UK GAAP technical provisions are adjusted for the following items:

- all margins for prudence are removed
- a provision is made for events not in data (ENID) to represent a true average of future outcomes
- technical provisions are stated both gross and net of reinsurance
- Bound But Not Incepted (BBNI)
- an additional Solvency II risk margin which is intended to represent a notional market value adjustment

The Association values technical provisions (TPs) using the regulations and methodology prescribed by the Solvency II Directive.

Solvency II Technical Provisions methodology

Technical provisions (TPs) for Solvency II purposes are made up of a best estimate of claims, premiums and expense cashflows, which are then discounted. Finally, a risk margin is added. The best estimate cashflows are the amounts expected to be paid/received in the future without any margin of prudence. Each element of the TPs is described in more detail below.

Homogeneous risk groups

The Association uses two homogeneous risk groups for TPs with the first being Business as Usual (BAU) and the second being Cladding.

Gross claims cashflows and reinsurance recoveries

Gross claims are projected to ultimate cost using a mixture of standard actuarial techniques, e.g. chain ladder and Bornhuetter-Ferguson, and non-standard techniques, particularly for cladding claims. In both cases actuarial judgement is applied; this judgement is important because the low volume of claims causes the data to be volatile.

For Cladding claims, the reserving process involves gaining estimates from the Claims' Handlers on the probability of claims 'crystallising' and estimates of the likely severity of claims that do settle. More Standard actuarial approaches would not be appropriate due to the nascent maturity of the cladding notifications, e.g. many have not yet been fully quantified and relatively little has been paid to date.

At the valuation date, 30 June 2022, the Association had no unearned business except for BBNI. This is because nearly all coverage is annual, renews prior to year end and incepts on the first day of the policy year. For the purposes of Solvency II any business that is bound (i.e. written) before the beginning of the Association's financial year (i.e. from 1 July 2022) is included in the calculation of TPs. However this concept is not applicable under UK GAAP where only business that has incepted is included in the TPs at the valuation date. BBNI includes all cash in-flows as well as outflows and in the Association's case this includes advance call, acquisition and administration expenses, reinsurance premiums, projected gross claims and corresponding reinsurance recoveries. The BBNI cashflow inputs of premiums and associated expenses are obtained from the call projections; and the BAU ultimate gross claims and reinsurance recoveries are outputs from the Association's premium risk model. This is a stochastic model which projects future gross claims by applying a statistical distribution (based on historical claims experience) to the exposure. The gross claims are then subjected to the reinsurance programme to obtain the expected reinsurance recoveries.

A percentage loading is added to both earned and BBNI business to allow for ENID, which allows for severe events to which the Association could be exposed but which are absent from the historical data.

Projected cashflows are estimated by applying payment patterns to the estimates of the ultimate gross claims and recoveries. The assumed payment patterns are derived using chain ladder methodology on historical gross paid claims triangles.

Premiums

There are no further premium cashflows expected relating to prior years.

Each of the Association's policy years is coterminous with its corresponding financial year. The consequence is that a full year's worth of business is recognised as BBNI business. A provision on the Solvency II balance sheet, known as the premium provision, is thus made for future premiums, claims and expenses that relate to BBNI business. Gross and reinsurance premiums for the BBNI business are taken from the business plan.

Expenses

Acquisition and administrative expenses

There are no acquisition or administrative expenses relating to unearned business.

For BBNI business, acquisition costs and internal administrative costs are calculated as a percentage of the total operating costs from the business plan for the forthcoming policy year. The operating costs from the business plan were set assuming a percentage increase in operating costs from 2021/22 plus some specific additional costs. The external administrative costs are consistent with the business plan.

Claims handling expenses

Allocated claims handling expenses are assumed to be included in the best estimate claims reserves and, therefore, no explicit allowance is made.

Unallocated claims handling expenses (i.e. salaries) payable in future years are split between expenses paid in the 2022/23 policy year and expenses paid in subsequent years. The expenses paid in 2022/23 are calculated as an assumed percentage of the total operating costs for that year; the expenses paid beyond 2022/23 are assumed to be those specifically reserved for in the GAAP reserves as part of Future Claims Handling Costs.

Investment management expenses

The investment management expenses are now deemed within the asset valuation (i.e. deducted at source).

Discounting

Claims, premium and expense cashflows have been discounted using the GBP yield curve as at 30 June 2022 provided by the PRA.

Risk Margin

The method used to calculate the risk margin is to:

- calculate the SCR for the Association using the standard formula;
- project the future SCRs using different run off patterns for different elements of the SCR as follows:
    - Non-life premium risk and operational risk are combined and run off in proportion to the square root of the percentage of future gross claims cashflows.
    - Counterparty default risk is run off in proportion to the square root of the percentage of future reinsurance recovery cashflows.
- discount and sum the projected SCRs and multiply by the cost of capital.

Uncertainty associated with the value of technical provisions

The estimate of the Solvency II TPs is considered to be an assessment of future obligations. However, it remains an approximation. Factors affecting the level of uncertainty are both internal and external and the nature of these factors is such that they are difficult to quantify in both likelihood and magnitude. The issues that affect the certainty of the technical provisions include:

- The considerable uncertainty surrounding the actual cost of the historic cladding notifications. However, there is now less uncertainty now than 12 months ago as payments have begun to be made towards cladding notifications.
- The assumptions used to calculate the Premium Provision are based on the expectation of an ‘average year’. Actual underwriting performance for that business may vary significantly from the assumed position at the outset.
- There is greater uncertainty associated with more recent policy years as these are still in an early stage of development.
- The yield curves used to discount future cashflows can vary from one year to the next which introduces additional balance sheet volatility that does not exist on a UK GAAP balance sheet.
- For certain elements of the technical provisions, for example ENID, very little data exists on which to base the assumptions and hence a high degree of judgement is required, which could lead to increased uncertainty in the estimates.

Data adjustments and recommendations

The Association uses various sources of data for the calculation of the Solvency II technical provisions and the Standard Formula. The majority of the data used is taken from the internal claims handling system, CLUB. A data governance framework is being embedded in the business to help ensure that the data being used is complete, accurate and appropriate. In addition to the data governance framework, validation tests are performed throughout the technical provisions calculation which includes reconciliation tests to ensure the data is consistent and reconcilable to data used for other purposes around the business, for example, the Association's year-end financial statements.

No other adjustments have been applied to the technical provisions such as the matching adjustment or volatility adjustments. Neither have any transitional arrangements been applied, for example on the risk free interest rate term structures. There were no data deficiencies for which an adjustment was necessary.

Changes since the last reporting period

There have been no material changes in the TPs methodology since the previous period.

E.3. Other liabilities

The following table sets out the value of the Association's other liabilities at 30 June 2022 and 2021.

Table 14: Valuation difference between other liabilities held on a GAAP basis and SII basis

	2022			2021		
	Liabilities per GAAP £m	Liabilities per Solvency II £m	Variance £m	Liabilities per GAAP £m	Liabilities per Solvency II £m	Variance £m
Member creditors	0.0	0.0	-	0.0	0.0	-
Other creditors	0.7	0.7	-	1.7	1.7	-
Reinsurance creditors	0.6	0.6	-	0.9	0.9	-
Total liabilities	**1.3**	**1.3**	**-**	**2.7**	**2.7**	**-**

The Association's other liabilities are recognised and valued for Solvency II purposes on the same basis as the annual financial statements, which are based on UK GAAP and there are no differences between the two.

E.4. Alternative methods of valuation

The Association does not use any alternative valuation methods.

E.5. Any other information

The Association considers no other information material to be disclosed.

F. Capital management

F.1. Own funds

The Association's Business Plan and ORSA process measure the Association's current and projected capital and solvency position over a three-year time horizon. The core capital management objective over this time horizon is for the Association to maintain Tier 1 basic own funds at a level which provides a capital buffer in excess of the higher of its SCR and its ORSA derived solvency needs.

The Association has a simple capital structure, with balance sheet reserves comprising a single item: Tier 1 capital derived from past underwriting and investment surpluses. There were no restrictions on the availability of the Association's own funds to support the SCR and MCR.

The Association's objective is to maintain its total capital resources (own funds) in line with its risk appetite statement over the insurance cycle. The Association forecasts its capital over a three-year planning horizon as part of its ORSA process.

At 30 June 2022 and 2021, the Association held the following own funds, on a Solvency II basis.

Table 15: Breakdown of total reconciliation reserve for SII

	30 June 2022 £m	30 June 2021 £m	Movement £m
Income and expenditure account	19.66	9.10	10.56
Investment reserve	5.25	15.81	(10.56)
Reinsurance reserve	0.40	0.00	0.40
General reserve	14.56	14.13	0.44
Total resources	39.87	39.03	0.84
Solvency II adjustment	5.19	0.59	4.59
Total own funds	**45.05**	**39.62**	**5.43**

As a mutual insurer with no share capital the capital structure consists of only one type of own fund. This consists of the reconciliation reserve. The reconciliation reserve equals the total excess of assets over liabilities. This item is available to fully absorb losses both on a going concern basis and in the case of winding up. The item also satisfies the criteria in Delegated Regulation (EU) 2015/35 and therefore is included in Tier 1. There are no items that are foreseen to reduce the reconciliation reserve.

Table 16: Analysis of total SII own funds by tier

	2021/22 £m	2020/21 £m
Tier 1	45.05	39.62
Tier 2	-	-
Tier 3	-	-
Eligible own funds	**45.05**	**39.62**

Analysis of significant changes during the period

The following table shows the reconciliation between UK GAAP total resources and Solvency II reconciliation reserve at 30 June 2022.

Table 17: Reconciliation of total resources per UK GAAP to reconciliation reserve per SII

	£m
Excess of assets over liabilities – UK GAAP	39.87
Asset valuation difference	3.47
Gross technical provisions valuation difference	1.71
Liability valuation difference	0.00
Total own funds – Solvency II	**45.05**

Differences between capital and reserves in the UK GAAP financial statements and the excess of assets over liabilities as calculated for SII purposes mainly stem from the revaluation of technical provisions. Liabilities arising from insurance contracts also need to be recognised at market consistent values. The value of technical provisions under SII is equal to the sum of the best estimate of the liabilities and the risk margin. To calculate the best estimate of the liabilities a deterministic approach is taken, whereas the risk margin represents the capital costs of the non-hedgeable risks included in the best estimate.

The following table shows the movement in own funds between 30 June 2021 and 30 June 2022:

Table 18: Movement in reconciliation reserve

	£m
Own funds at 30 June 2021	39.62
Increase in net technical provisions	13.86
Increase in investments	(11.20)
Decrease in other assets	1.40
Increase in other liabilities	1.37
Own funds at 30 June 2022	**45.05**

F.2. Solvency Capital Requirement and Minimum Capital Requirement

F.2.1. Solvency capital requirement

The following table shows an analysis of the Association's SCR split by risk modules and comparison to the previous year end.

Table 19: Analysis of SCR

Heads of risk	SCR 30 June 2022 £m	30 June 2021 £m	Movement £m
Underwriting risk	16.1	20.1	(4.0)
Market risk	9.1	13.8	(4.8)
Counterparty default risk	0.6	0.4	0.2
Operational risk	1.1	1.4	(0.3)
Aggregate SCR	**26.9**	**35.7**	**(8.8)**
Correlation credit	(5.1)	(7.0)	1.9
Aggregate SCR net of correlations	**21.8**	**28.7**	**(6.9)**

The Association has not used any simplified calculations as set out in Article 304 of Directive 2009/138/EC in the calculation of the SCR. The Association has not used undertaking-specific parameters in any of the risk modules described below.

The main changes in the SCR since 30 June 2022 reflect the following factors.

Underwriting risk

The SCR underwriting risk capital requirement calculation is made up of three elements, premium risk, reserve risk and catastrophe (CAT) risk. Premium risk is based on the higher of either the expected value of net premiums over the next 12 months or the value of net premiums earned over the last 12 months, whilst reserve risk is based on the valuation of net technical (claims) provisions. CAT risk is based on a prescribed scenario-based approach of one claim from a Member resulting in one full claim on the Association.

Reserve risk has decreased due to a reduction of approximately £13.9m net technical (claims provisions). This is predominately due to significant payments being made towards settling large cladding and BAU notifications in the last 12 months.

Premium risk and Catastrophe risk are relatively unchanged.

Overall, SCR underwriting risk capital has decreased by £4.0m, which represents a 20% decrease since last year.

Market risk

Market risk reflects a combination of areas - interest rate risk, equity risk, currency risk, spread risk and concentration risk. Market Risk has decreased by £4.8m to £9.1m (a 34% decrease) predominately due to significant decreases in Equity Risk and currency risk.

The decrease in Equity risk is driven by firstly a significant fall in the value of equities held by the Association, due to a substantial fall in Equity values by £6.8m in the twelve months to 30 June 2022. Secondly, as per Solvency II, a symmetric adjustment is applied to the Equity shock and this adjustment is significantly lower than it was at 30 June 2021, with there being a decrease of 9%. This is because the symmetric adjustment mechanism is designed to reduce the SCR in times of falling equity values so that insurers, all else being equal, are not required to divest their equity portfolio. So whilst the Association available assets have decreased, due to bad equity returns, so has the capital charge.

The decrease in currency risk is driven by an improvement in matching. USD investments have fallen in the past 12 months while there are no corresponding USD claims liabilities, hence the USD currency mismatch has fallen since last year.

The other market risk elements have not materially changed.

Counterparty default risk

The counterparty default risk capital requirement has increased since last year as we are projecting greater expected reinsurance recoveries, cash and derivative exposure and debtors, but it is still at a relatively low level.

Operational risk

There has been a decrease in the operational risk charge since last year and this has been driven by the lower claims reserves.

Overall SCR movement

Overall, the SCR has decreased by £6.9m year on year, from £28.7m to £21.8m, a 24% decrease. The drivers being the decreases in equity risk, currency risk and reserve risk.

F.2.2. Minimum capital requirement

The MCR calculation is based on the net value of technical provisions and the premiums written during the last 12 months. The result of the calculation is then subject to a floor and a cap, of 25% and 45% of the SCR respectively. As at 30 June 2022, the MCR continues to be set at the minimum level, i.e. equal to 25% of the SCR. The MCR as at 30 June 2022 was £5.4m, a 24% decrease from last year which follows the change in the SCR.

F.2.3 Overall capital position

The following table shows the Association's capital position in relation to the SCR and the MCR at 30 June 2022.

Table 20: Overall capital position

	SCR £m	MCR £m
Capital requirement	21.8	5.4
Own funds available	45.1	45.1
Headroom	**23.3**	**39.6**
Solvency ratio	2.1	8.3

By reference to the SCR and MCR, the Solvency II own funds exceed the capital requirements.

F.3. Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

The Association does not use this sub-module.

F.4. Difference between standard formula and any internal model used

No internal or partial internal model has been used in the calculation of the SCR.

F.5. Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

The Association has fully complied with the SCR and MCR requirements during the period under review. The calculation of the SCR and MCR is subject to supervisory assessment and may change following the review of the SCR and MCR calculation by the Regulator.

F.6. Any other information

There is no other information to report regarding the Association’s capital management.
